

## Benchmarked clusters

### Country overview

# Country Overview of Benchmarked Clusters

This brochure provides an overview of the clusters that have been benchmarked since November 2010. The list includes 177 clusters from 15 European countries as of January 16<sup>th</sup>, 2012.

Each cluster is presented with its name, the comparative portfolio and its web address. The comparative portfolio indicates the technology area in which the cluster was compared with peer clusters. As a cluster can cover more than one technology area other comparative portfolios are also possible. In addition to a technology-specific comparative portfolio each cluster was also compared to an excellence portfolio. The excellence portfolio includes clusters that are of particular high quality. The assessment of excellence is based on composite excellence indicator developed by European Secretariat for Cluster Analysis (ESCA) by integrating quality criteria from the European Cluster Excellence Initiative (ECEI) with service performance indicators from the benchmarking.

Each cluster was analyzed based on an interview of the cluster manager conducted by an impartial ESCA benchmarking expert (see Annex 1 for an overview). The interview covers 36 indicators with regard to the structure of the cluster, the cluster management and the governance of the cluster, financing of the cluster management, services provided by the cluster management, contacts and interaction within the cluster and achievements and recognition of the cluster.

Results are presented by an individual report to the cluster management and include also recommendations for further improvement in line with the requirements of the cluster quality label that is currently developed by the European Cluster Excellence Initiative.

## What is ESCA?

ESCA is the European Secretariat for Cluster Analysis. Based in Berlin and hosted by VDI/VDE Innovation + Technik GmbH the secretariat supports in particular cluster managers and policy makers with advice on cluster development.

ESCA experts have developed a methodology for cluster benchmarking that has been widely acknowledged in Europe. Since 2007 they have benchmarked more than 250 cluster management organizations in various projects. Being also involved in the European Cluster Excellence Initiative (ECEI) ESCA experts contribute to the development of tools that support cluster managers on their way to excellence.
