

Benchmarked clusters

Country overview

Country Overview of Benchmarked Clusters

This brochure provides an overview of the clusters that have been benchmarked since November 2010. The list includes 177 clusters from 15 European countries as of January 16th, 2012.

Each cluster was analyzed based on an interview of the cluster manager conducted by an impartial ESCA benchmarking expert. The interview covers 36 indicators with regard to the structure of the cluster, the cluster management and the governance of the cluster, financing of the cluster management, services provided by the cluster management, contacts and interaction within the cluster and achievements and recognition of the cluster.

Results are presented by an individual report to the cluster management and include also recommendations for further improvement in line with the requirements of the cluster quality label that is currently developed by the European Cluster Excellence Initiative.

What is ESCA?

ESCA is the European Secretariat for Cluster Analysis. Based in Berlin and hosted by VDI/VDE Innovation + Technik GmbH the secretariat supports in particular cluster managers and policy makers with advice on cluster development.

ESCA experts have developed a methodology for cluster benchmarking that has been widely acknowledged in Europe. Since 2007 they have benchmarked more than 250 cluster management organizations in various projects. Being also involved in the European Cluster Excellence Initiative (ECEI) ESCA experts contribute to the development of tools that support cluster managers on their way to excellence.
